

Your phone is charging upstairs. It is buried in your bag on the commute. Or you are about to head into a long meeting and want to know whether to charge first.

Unplugged makes battery information easier to check in those everyday moments. Apple Watch complications put your iPhone's charge on your watch face, while configurable notifications let you choose the battery levels you care about.

There is useful information on the iPhone too. Battery history shows how charge changes throughout the day. Forecasts use recent readings to estimate time remaining or time to a full charge. Live Activities and charging animations offer additional ways to follow charging progress.

Unplugged started with iPhone battery monitoring on Apple Watch and has grown to serve people who want a clearer picture of their battery throughout the day—with or without a Watch.

Key Features

- **iPhone battery on your wrist.** Choose from a range of Apple Watch complications to suit your watch face.
- **Alerts at the levels you choose.** Configure battery thresholds for charging and discharging.
- **History and forecasts.** Review recent battery patterns and see estimates of time remaining or time to full.
- **Charging at a glance.** Follow battery level and charging status through Live Activities and charging animations.
- **Attention to accessibility.** VoiceOver support and adaptable text help make battery information easier to access.

Unplugged is free to download, with optional Premium features available through subscriptions or a lifetime purchase.

Press Coverage

"A really useful tool at least for me"

About the Developer

Christian Skorobogatow is an independent iOS developer based in Madrid, Spain, and an Apple Developer Academy graduate. He builds Unplugged and other apps as side projects, dedicating time around his full-time role at Schwarz, where he works on the Lidl app for the Design System Team.

Unplugged began in 2024 with a simple idea: check your iPhone's battery from your Apple Watch, even when your phone is charging in another room or tucked away in a bag.

It has since grown to include custom alerts, charging displays, battery history, and forecasts, with customer questions and feedback helping shape what Christian builds next.
